Notes:
This Accessibility Conformance Report documents an independent accessibility evaluation of the Edvisor.ai Courses Module conducted by WCAG Designs (Sana Kapasi). The evaluation scope included all the instructor and student workflows identified in the scope and reflects the product version available as of October 7, 2026.

Evaluation Methods Used:
Accessibility evaluation was conducted through manual inspection and assistive technology testing, including keyboard-only navigation and screen reader testing with NVDA/JAWS. Color contrast was verified using contrast analysis tools, and reflow behavior was assessed at 200 percent and 400 percent magnification on a 1280 by 1024 display.

"Voluntary Product Accessibility Template" and "VPAT" are registered
service marks of the Information Technology Industry Council (ITI)

Evaluation was performed against WCAG 2.2 Level A and AA success criteria, Revised Section 508, and EN 301 549. Remediation and revalidation results are reflected in the conformance determinations in this report.

Testing was conducted against "Intro to WCAG 2.2: The Accessibility Audit Course" (course code 3I7E4H), provided by the vendor as a representative sample of instructor-created course content. Pages and components encountered within this course are consistent with the platform's standard course architecture and are considered representative of the broader instructor and student experience.

The initial accessibility audit identified 161 defects across the evaluated scope. The conformance determinations in this report reflect the results of remediation and revalidation completed as of October 7, 2026.

This Accessibility Conformance Report reflects the findings of a structured accessibility evaluation conducted against the version of Edvisor.ai available at the time of testing, as noted in the Report Date above. Conformance determinations are specific to the Courses module evaluated under the Instructor and Student roles, using the course and account credentials provided for this engagement, and do not extend to features, modules or workflows outside the defined scope.

The pages and components evaluated are representative of the platform's standard course architecture and reflect the consistent layouts, components and interaction patterns encountered across courses built on the same underlying framework. This report is therefore intended to provide a meaningful and reliable indication of the platform's accessibility posture within its primary instructional environment.

Edvisor.ai is an actively developed platform, and accessibility conformance is best understood as a continuous commitment. Product updates, new feature releases, content changes and third-party component integrations can each introduce new accessibility considerations or affect previously conformant

functionality. Accordingly, this report should be reviewed and updated following any material changes to the application, and periodic re-evaluation is recommended to ensure conformance levels remain accurate across the full product lifecycle.

This report is provided for informational purposes and does not constitute a legal certification, guarantee or warranty of full accessibility compliance. It represents the professional findings of the evaluator based on the scope, methodology and assistive technology described herein.
